

# Wprowadzenie do technologii Docker

Mateusz Rogowski

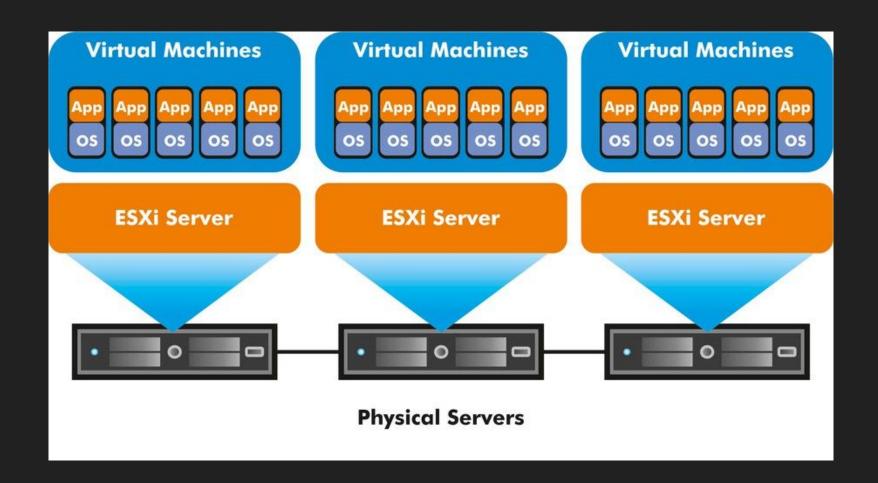

# Maszyny Wirtualne

Maszyna wirtualna kontroluje wszystkie odwołania uruchamianego programu bezpośrednio do sprzętu lub systemu operacyjnego i zapewnia ich obsługę. Dzięki temu program uruchomiony na maszynie wirtualnej "myśli", że działa na rzeczywistym sprzęcie, podczas gdy w istocie pracuje na sprzęcie wirtualnym, "udawanym" przez odpowiednie oprogramowanie (maszynę wirtualną).

- VMware
- Hyper-V
- VirtualBox

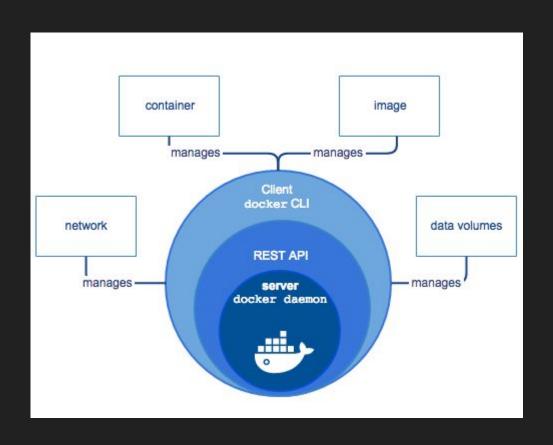

#### Containers vs. VMs

source: Docker

# Docker

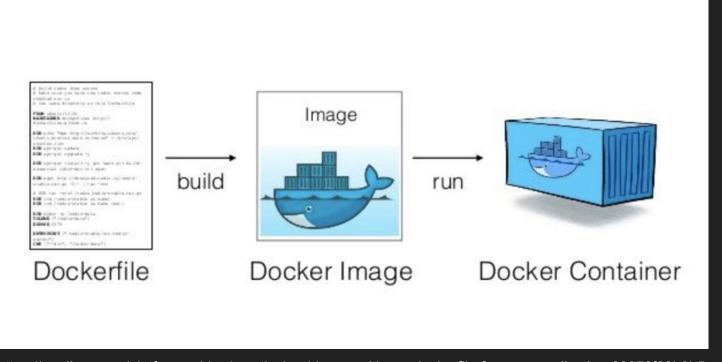

# Podstawowe elementy

**DOCKERFILE** - Docker can build images automatically by reading the instructions from a Dockerfile. A Dockerfile is a text document that contains all the commands a user could call on the command line to assemble an image.

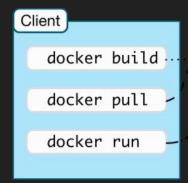

**IMAGE** - An image is a read-only template with instructions for creating a Docker container. Often, an image is based on another image, with some additional customization.

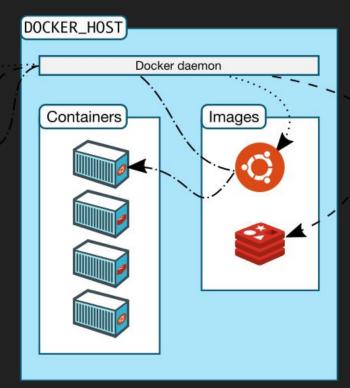

**CONTAINER** - A container is a runnable instance of an image. You can create, start, stop, move, or delete a container using the Docker API or CLI.

#### Docker - flow

#### Architektura

source: Docker

#### Docker - Komendy

**ps** - List containers

run - Run a command in a new container

exec {container\_id} - Run a command in a running container

exec -it {container\_id} bash - Run bash in a running container

logs {container\_id} - Fetch the logs of a container

**build** - Build an image from a Dockerfile

kill {container\_id} - Kill one or more running containers

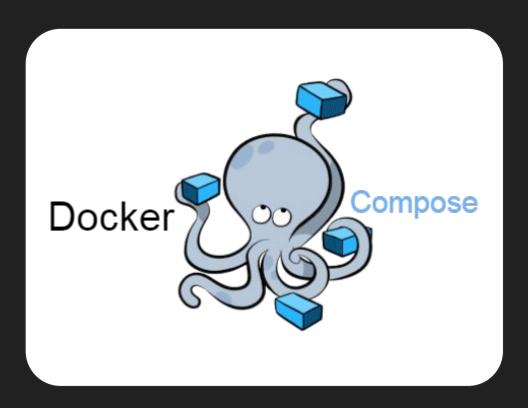

#### Docker

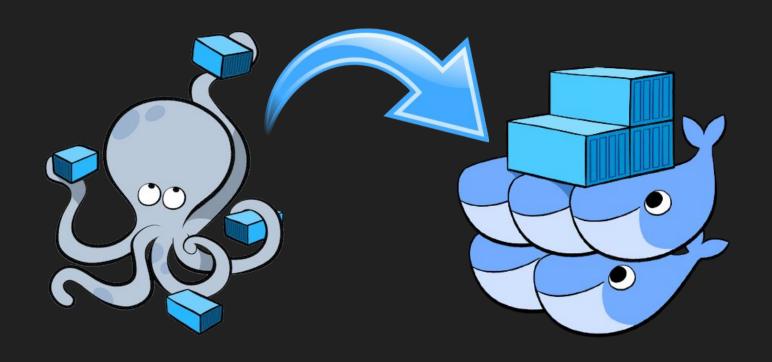

Live demo - <a href="https://hub.docker.com/">https://hub.docker.com/</a>

#### Docker

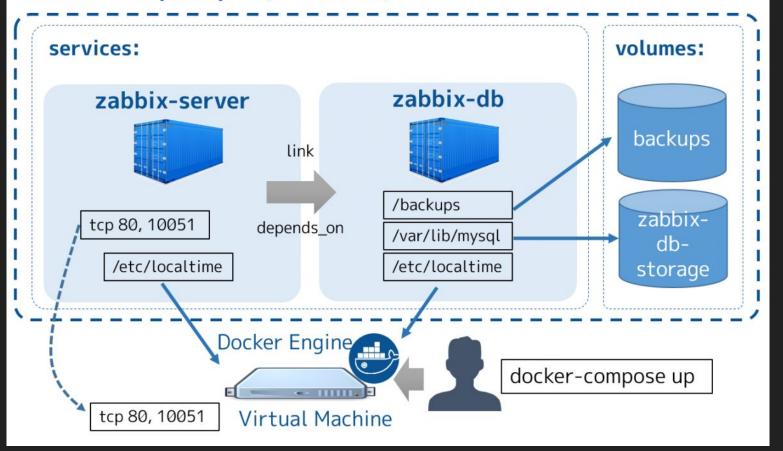

#### Live demo - <a href="https://hub.docker.com/">https://hub.docker.com/</a>

```
docker run --name some-drupal -p 8080:80 -d drupal
http://localhost:8080
docker ps
docker logs {container-id}
docker logs -f {container-id}
docker exec -it {container-id} bash
docker kill {container-id}
```

#### docker-compose.yml (v2 format)

# docker-compose - Komendy

**build** - Build docker compose stack

**up** - Start docker compose stack

**stop** - Stop docker compose stack

# Django project - przykłady

Live demo
